DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 and 3, drawn to a method for generating a secondary library of scaffold protein variants.
- II. Claims 2 and 4-6, drawn to a method for generating a secondary library of scaffold protein variants comprising generating a probability distribution of amino acid residues.
- III. Claims 7, drawn to a composition comprising a plurality of secondary variant proteins.
- IV. Claim 8, drawn to a composition comprising a plurality of nucleic acids.
- V. Claim 9, drawn to a method for generating a secondary library of protein variants comprising the steps of synthesizing a plurality of scaffold protein secondary variants.

The inventions are distinct, each from the other because of the following reasons:

Inventions III and IV are drawn to different products (compositions) and thus each has different modes of operation,

Art Unit: 1639

different functions, or different effects (MPEP § 806.04, MPEP § 808.01). The product of Group III is drawn to a composition of proteins. Group IV is drawn to the intermediate nucleic acid composition. Each of the compositions contains different compounds that differ in structure and function.

Inventions (I, II and V) and (III and IV) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to different products and different methods. The compositions can contain other components not included in the method and can be generated by varying the primary sequence.

Inventions I, II and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to different methods that have different modes of operation, functions, steps and/or results. Each of these Groups has different patentability determinations. A prior

Art Unit: 1639

art reference anticipating one Group would not render obvious the other Groups.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, and the search required for Group I is not required for Groups II-V, specifically the literature searches, restriction for examination purposes as indicated is proper.

A telephone call was made to Renee Kosslak on 11/19/02 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
